www.aibami.com

Development History

2009

Company established, focusing on logistics software and laying the industry foundation.

2011

Formerly Pingyuan Software, focusing on cross-border e-commerce logistics track.

2015

International consolidation, serving cross-border e-commerce enterprise customers.

2020

Integrated three business lines to form a complete product matrix.

2023

Launched AI Agent intelligent body, leading the intelligent transformation.

2026

Officially entered the Southeast Asian market with strategic layout.

02

Core Advantages

Dual Drive of Technology and Model

Eight Core Advantages (1/2)

Technological DNA

Founder with tech background, 80% of the team are technical and service staff with profound technical heritage.

Model Innovation

Pioneered the "Multi-organization + Multi-warehouse + Alliance + Agency" business model, leading industry development.

Industry Experience

15 years of industry experience, accumulated over 1200 successful client cases, deeply understanding industry pain points.

AI Empowerment

Deep integration of AI digital employees with supply chain scenarios, significantly improving operational efficiency and intelligence.

Eight Core Advantages (2/2)

Microservice Architecture

High Availability, High Concurrency. Ensures system stability and responsiveness even under heavy load.

Cloud-Native Deployment

Flexible deployment options including Public, Private, and Hybrid cloud environments to meet diverse business needs.

AI Model Integration

Seamlessly supports advanced AI models like ChatGPT, Claude, etc., empowering intelligent business processes.

Multi-end Support & Open API

Covers PC, Mobile, Mini Program, and AI Assistant. Provides seamless integration with ERP/WMS systems.

03

AI Digital Employees

A New Era of Intelligent Office

AI Digital Employees: Your Business Growth Engine

Reduce Labor Costs
Optimize resource allocation, reducing costs by 30%-60%.

Improve Work Efficiency
Automate processes, increasing efficiency by 3-5 times.

7×24 Hour Service
Uninterrupted response to ensure business continuity.

AI Intelligence Core

Core Products: Intelligent Customer Acquisition & Service

Intelligent Customer Acquisition Engine

POSITIONING

AI-driven intelligent customer acquisition and marketing automation system.

KEY FEATURES

- AI-based analysis of social media
- Comprehensive marketing data analytics & reports

Omni-channel Customer Service Hub

POSITIONING

AI-powered unified customer service management platform.

KEY FEATURES

- Unified multi-channel access & intelligent Q&A
- Customer sentiment analysis & intelligent routing

Core Products: Data Decision & Management

Data Decision-Making Commander

POSITIONING

AI-driven data analysis and decision support system.

KEY FEATURES

- Intelligent alerts & real-time monitoring
- Trend prediction & root cause analysis
- AI-generated decision suggestions

Intelligent Management Collaborator

POSITIONING

AI-powered internal management and operation automation platform.

KEY FEATURES

- 7x24 handling of daily inquiries
- Automatic document processing & automation
- Knowledge management & training programs

04

Supply Chain Digitalization

Empowering Global Logistics

Supply Chain Digitalization Product Matrix

Integrated Supply Chain System

Build an end-to-end business system for enterprises to go global, empowering Chinese brands with seamless integration.

Purchasing & Consolidation System

An exclusively developed integrated system for global purchasing and efficient consolidation, optimized for cross-border e-commerce operations.

Cross-border TMS System

Integrated transportation and distribution management supporting multi-modal transport, container tracking, and international line management.

Overseas Warehouse WMS System

Helps overseas warehouse enterprises build a global warehouse layout, achieving efficient inventory management and order fulfillment.

Core Product System

OMS Order Management System

The starting point of the supply chain, responsible for order receiving, processing, and distribution from all channels.

WMS Warehouse Management System

Conducts intelligent management of goods in the warehouse, optimizing the entire process from receiving to outbound.

TMS Transportation Management System

Focused on the intelligent management of the transportation process, optimizing scheduling and reducing logistics costs.

AI Digital Employees

Based on large language models and Agent technology, automatically completing repetitive tasks and reducing labor costs.

05

AI + Supply Chain

Integrated Solutions

AI + Supply Chain: Creating a New Paradigm

AI + TMS = Intelligent Transportation

- Dynamic dispatch & route optimization
- Automated service quality handling
- Real-time risk alerting

AI + WMS = Intelligent Warehouse

- Smart picking & optimal inventory planning
- Precision demand forecasting
- Visual inventory & automated verification

Typical Scenarios: AI Empowers Business

Intelligent Logistics CS

Automatically answer logistics tracking queries, improving response speed.

Response Speed

+50%

Intelligent Sales Assistant

Automatically screens leads and identifies high-intent customers for manual follow-up.

Efficiency Increase

2x

Operation Decision-Making

Real-time analysis, exception alerting, and root cause analysis for better decisions.

Efficiency Improvement

5x

06

Success Cases

Trusted by Benchmark Clients
